# SAC Developers Level 200

## Duration

3 Days

## Course Description

Take your SAP Analytics Cloud developer skills to the next level with *SAC Developers Level 200*! You have some experience with building basic models, but this course will teach you how to maintain a model and give an overview of security and other admin functions.

Within this course you will learn about Currency Conversion in SAC at the model level as well as within stories. Students will then learn about the different types of calculations available within SAC. Finally, you will learn how to take advantage of an advanced filtering option called Linked Analysis, the various smart features within SAC, and the Digital Boardroom functionality.

# SAC Developers Level 300

## Duration

3 Days

## Course Description

In our most advanced developer course, *SAC Developers Level 300* starts by introducing students to the concept of blending multiple data sources together. This includes bringing multiple data sources into a single model, but also bringing multiple models into a single story. You will then learn how to take advantage of more advanced predictive capabilities in SAC.

Additionally, students will learn about Data Actions, which are a type of planning function that can be executed with the click of a button once developed. Finally, students will explore the Analytics Designer, which allows for the building of reports and dashboards with a greater degree of customization beyond what is found in standard stories.

# SAC Administrators

## Duration

3 Days

## Course Description

In *the SAC for Administrators* course, you will learn how to maintain and administer a SAC tenant. First, you will learn how to build connections between SAC and other data sources. You will then learn about many aspects of security within SAC to ensure that your users can only access what they need to. This includes teams and roles, sharing and assignment rights, as well as data access.

Additionally, we will cover items to consider if your organization has more than one SAP Analytics Cloud tenant, including how to migrate content from one tenant to another. And finally, you will learn about the many system administration functions available within SAC.
